

1 **ABSTRACT OF THE DISCLOSURE**

2 A gearshift knob includes a body and a solid pattern. The body has a grip
3 and a top. The solid pattern is formed either on the top or the grip of the body and
4 could be a company logo, significant symbol, trademark etc. Consequently, the
5 solid pattern makes the gearshift knob to be more frictional and provides an
6 improved feeling to prevent a situation of the gearshift slipping out of a hand
7 when a driver holds the gearshift knob to change gears. Also, the solid pattern
8 makes the gearshift knob more attractive to consumers. Furthermore, because
9 the solid pattern could be a company logo or trademark, the gearshift knob with
10 the solid pattern will promote the company image to the consumers.
